

# **Report**

**09/27/05**

**1. Experimental Progress:**

According to Rich Ferry, technicians have started working on the oxygen sensors to control oxygen level in experimental water. I will work with Rich to make a list of tasks that need to be completed before we can start our second phase of experiments.

**2. pH Sensor from Endress & Hauser:**

A pH measuring system from Endress & Hauser has arrived. I am hoping that installation would be completed by the end of this week.
