Author:	Eric Landahl
---------	--------------

Experiment:	laser-dressed atoms
-------------	---------------------

Category:	setup
-----------	-------

Subject:	mono stopped scanning properly
----------	--------------------------------

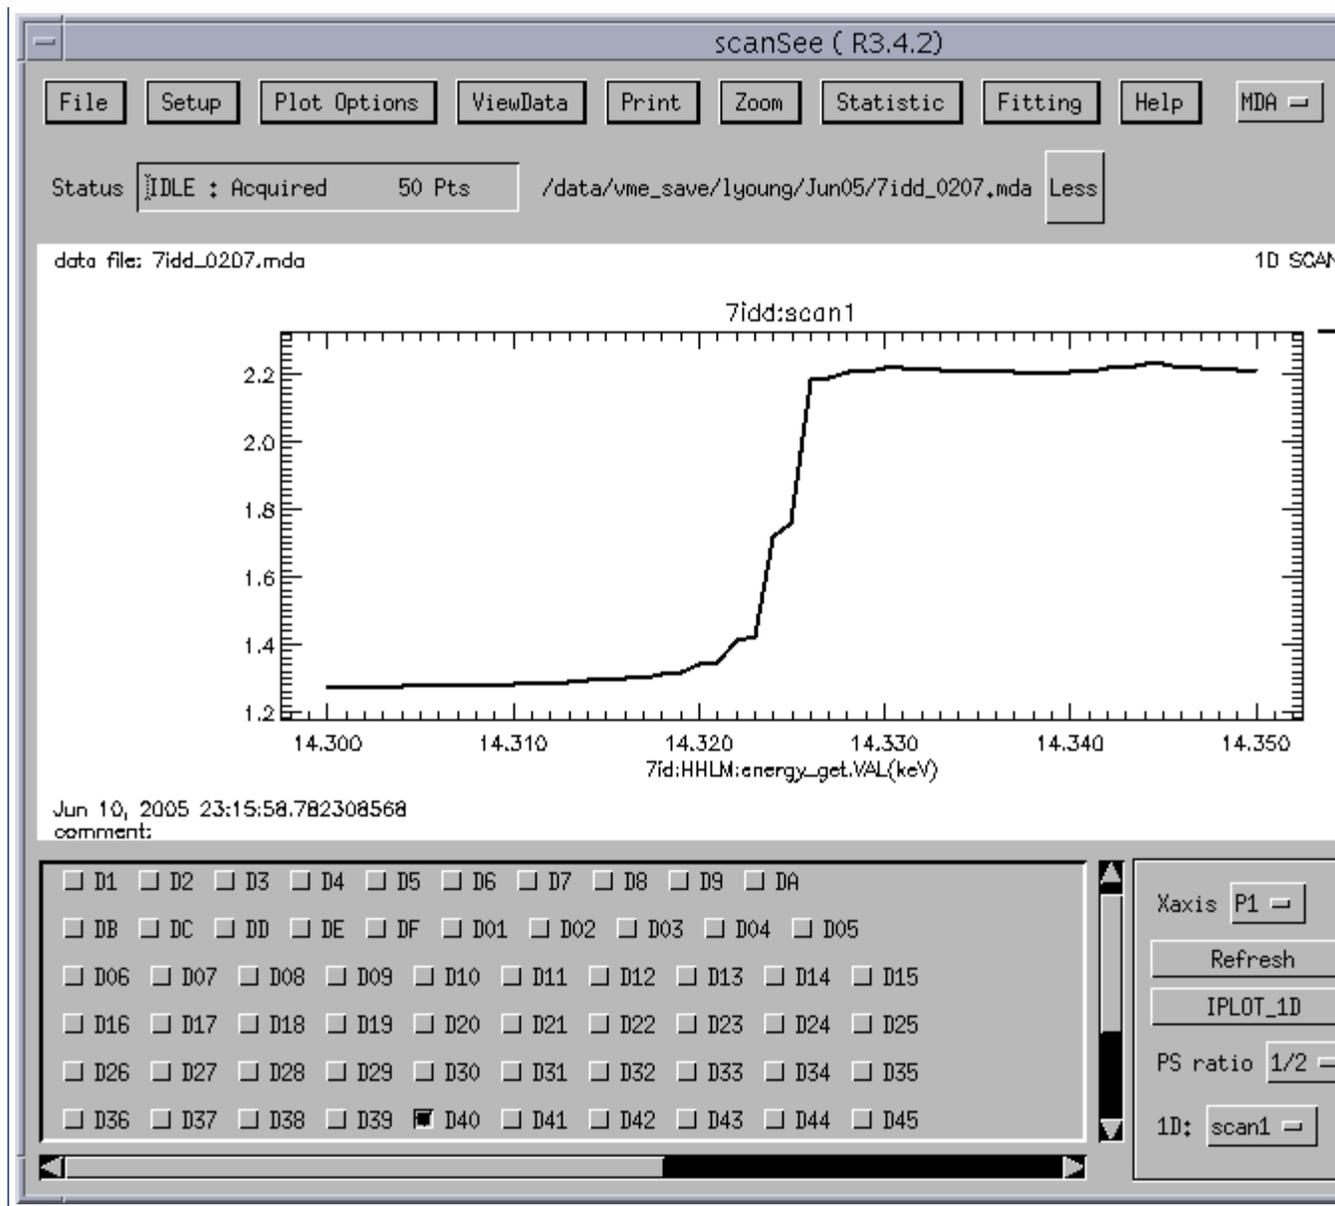

The mono no longer scans smoothly. See the attached file for a krypton absorption edge that was taken in the B-hutch. It is very jagged, in contrast to identical scans done by both me and Don walko a few days ago.

This has been repeated with both mono backlash directions, and is a problem either way.

Dohn is also puzzled.
